
STUDENT WORKER

Student of fourth semester of economics and business administration that does not restrict his education to school's curriculum. My studies via various projects has taught me the importance of teamwork when it comes to problem-solving. Therefore, I strive to educate myself as much as possible to become a bigger asset to the team. My bachelor's degree is only a beginning – I plan to take up master studies of business intelligence in the future as I am in great love with numbers. Apart from my studies, I explore the world of programming. I will do my best to be of value to your company.

Samples of the code are provided via the hyperlink in the top right corner of this paper.

SKILLS

ABOUT ME

In my free time, I enjoy playing various card, board and computer games with my friends and family – preferably strategic ones, as I love to think ahead of my opponents and consider various outcomes of my actions. Additionally, I am very passionate about sports, especially powerlifting, as it cultivates discipline, self-improvement and patience. During tough COVID times I got back to my old passion as well – Rubik's cubes. I still can solve most of its variations in satisfying times!
